

Remote Video Inspections (RVI)

Make residential and commercial follow-up inspections a breeze with SAFEbuilt's remote video inspections (RVI).

Simplify follow-up inspections

Follow-up inspections often take up time from staff who need to focus on high-priority inspections. But safe, dependable, streamlined RVIs provide an alternative to hiring additional inspectors or falling behind on inspection requests.

Minimize wait times and disruption

Conduct inspections at scheduled times with reduced delays

Keep inspectors on priority projects

Allow local inspectors to focus on complex tasks and first-time inspections

Technological precision

Geolocation verification ensures accurate and thorough inspections

No apps. No logins. No stress.

Adding technology to your processes doesn't have to complicate work for your team.

HOW RVI WORKS

01

Client schedules appointment

**02**

Inspector sends SMS link at time of appointment

**03**

Client opens link and inspection begins

The inspector can zoom in and out, use markup tools, make notes, capture high-quality images and videos, and more!

**04**

Inspector ends call

Digital records of inspections are stored and easy to retrieve

See RVI in action!

Sometimes, you have to see it to believe it. Request an RVI demo with SAFEbuilt's inspection team today.
